### Summary

Higher feet for 140mm fans and 280mm radiator for the NR200P.

[standfuss](#)

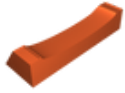

I installed a 280mm radiator in the bottom of the NR200P (bottom plate removed, fan screws from below through the fans into the radiator hold it perfectly in place). Of course, the 25mm fans need some air, so I needed higher feet. They are attached using 2-sided adhesive tape. Pads or similar should be attached to the underside for decoupling.

Easy printing. Used 10% infill.
