Originally published here: [\(WIP\) Motorola Moto E7 & E7i Power xt2052 case by tato_713 - Thingiverse](#)

This case was designed for the phone E7, E7 Power and E7i Power. It could be compatible too with the E7 Plus, but this one has a slightly different shape, so I cannot assure this. Some of the models are designed for rigid materials and others for flexible ones. **The models' materials are not interchangeable**, so pay attention to the file names. If you have any request on the design just ask me.

For other phone cases check [this](#).

Here is the explanation of the files names:

- **Flex:** made for elastic filaments like TPU. Not tested.
- **Rigid:** made for rigid (non-elastic) filaments like PLA, ABS, HIPS, etc. The entire model is a little bigger and the holes for the buttons are opened on the front side. Tested only on PLA on the E7.
- **Banded:** It has regular horizontal grooves in the bed surface, to make the finished texture more regular, avoiding irregularities on that part, and bringing it a better grip.

I spend part of my time making these models, letting them available and free for everyone. If you want to support my work, you can contribute with me by [donating to this PayPal account](#).
