The SteamController's bumper is one of the most common things to break, since it relies on a small piece of plastic latch to be triggered. All parts of the Steam Controller are available for printing; however, the one with this latch is attached to another one by a small metal rod which can't be easily retrieved from the original parts.

This part can be printed separately, then added to the parts already in place. It is tightened with one of the existing screws.

Printing:

No support needed.

The part really is tiny, prints in <10 minutes.

Print Settings

Printer Brand:

Prusa

Printer:

I3 MK3S

Rafts:

No
