## Summary

Mount to put an apple magsafe charger on a car vent.

Due to PLA's low melting temperature, I recommend printing this with PETG or ABS if you live somewhere that gets warm in the summer so that it does not deform or melt while inside a hot car. I included the step file in case you want to change the position of the cable channel.

I recommend printing with a brim or raft, and with the clip for the vent on the bottom. This way the charger will friction fit in smoothly.
