Phone Stand for use with vehicle cup holder. Can be used with phone in vertical or horizontal position. The stand swivels by moving it within the cup holder. It has a built-in 30deg slant to provide a good viewing angle which can be increased or reduced slightly by tilting (adjusting) the stand within the cup holder itself. It works on Sorento and Pilot SUVs and probably on many others due to the angled/sloping body. I needed something simple to keep my phone in visible range for normal driving and when trying to navigate with maps. Phone stays put with slight friction and under normal driving conditions.

Printed in Atomic PLA, with no supports, brim (for better adhesion), and using variable layers.
