Summary

The metal gimbal stick ends for X20S

[Hobby & Makers](#) > [RC & Robotics](#)

Stick ends for gimbals on the X20 and X20S FrSky transmitters.

You might need to adjust Horizontal Expansion to pull in the outside walls a bit for overextrusion on the outer walls. You can also just increase the size by little amounts in your slicer to adjust the size if it is too tight when printed with your 3d printer.
