I took a while to optimize supports for a nice balance between speed of print and quality. You can print this in several ways, but this keeps the most important parts support free. You may want to sand just a touch on the underside grips to clean up some of the roughness where it had supports. Other than that, just glue it together.

You can actually fit the whole steam deck standing right side up or upside down on a mk3 printer if you get the angle just right, but I wanted the top side of the deck to look the best so I chose to print it this way.
