Summary

Remixed to accommodate our mesh inlet that had 2 screw holes instead of 1 in the center. Also added an air inlet cover.

Moved into a house with a poorly maintained jetted tub. After multiple attempts at deep cleaning using various specialty cleaning products it was bad enough that my wife and I were considering a full bathroom remodel because the tub can't be removed without breaking tiles including the wall which ties into the shower and even the floor tiles.

I found NonDisjunctions Jetted Bath Tub Plugs which worked beautifully for the tub jets, but my drain/inlet had 2 screws instead of one in the center, so I made a new/separate version of his **tub-mesh-drain-cover-v1**.

I also had an air inlet for the jets that had a rather old and discolored, my wife asked me to make a cover for that as well so that we sealed the whole system up and so that it all matched.

This remix is based on

Jetted Bath Tub Plug for American Standard Whirlpool tub nozzles & strainer
