Summary

A compact tool holder that easily mounts on the frame, made in 2018!

(On Thingiverse since 2018, porting to PrusaPrinters.org)

Handy holder for commonly used tools, yet out of the way.

Strong, secure mount.

Offset from the power supply as to not block any air flow.

Placed to the right side of the mk3. I use it to hold pliers, allen wrenches and nozzle cleaners.

Easy to print, no supports required. I used orange PLA
