Summary

Remix the case to be tall and as narrow as possible

[3D Printers](#) > [3D Printers - Upgrades](#)

I like the original design except I wanted something more narrow. It has everything i wanted,, rear cable entry, front-facing power switch. My remix rotated the power panic board. It is vertical instead of horizontal in the original design. Removable side panel to make wiring easier. Honestly, at the end of the day, I didn't really save a lot of room, maybe a few mm here and there. Now now the PS doesn't protrude past the frame.

The cover prints fine as is but I was paranoid so I made a version with a brim, since I couldn't figure out how to do selective brim in Prusaslicer.

This remix is based on

Mean Well LRS-350 PSU Case with Rear Plug for Prusa i3 Bear Full Upgrade (R3)
