For the regular iPhone 6 Plus, 6s Plus, 7 Plus and 8 Plus, see [this](#). This case was tested only with the iPhone 6, 6s, 8 and SE (2020), but it is the same

size and about the same shape as the iPhone 7. Thanks to [Adam Vaněk](#), who test it with the iPhone 8, and [Spencer Seely](#), for testing it for the iPhone 6. Please, if you test any of these model give me a feedback of it.

Some of the models are designed for rigid materials and others for flexible ones. **The models materials are not interchangeable**, so pay attention to the file names. If you have any request on the design just ask me.

2021 is the year when most of country started the covid-19 vaccination; that's why I added a design with the 2021 with the "0" as a virus silhouette and the "1" as a syringe.

For other phone cases check [this](#).

Here is the explanation of the files names:

- **Flex:** made for elastic filaments like TPU. Tested on TPU on the iPhone 6s, thanks to [Sam Harford](#).
- **Rigid:** made for rigid (non-elastic) filaments like PLA, ABS, HIPS, etc. The entire model is a little bigger and the holes for the buttons are opened on the front side. Tested on PLA on the iPhone 6 and 8; and tested on PETG on the SE (2020) by the user [Arkona](#).
- **Aired:** It is widely opened in the back so that the phone can dissipate the heat easily.
- **Banded:** It has regular horizontal grooves in the bed surface, to make the finished texture more regular, avoiding irregularities on that part, and with a better grip.

I spend part of my time making these models, letting them available and free for everyone. If you want to support my work you can buy me a coffee in Ko-fi:
