## Summary

If you use loose coffee grounds in your Keurig K-cup machine this may be useful to you.

This is an original design. If you use loose coffee grounds in your Keurig K-cup machine this may be useful to you. I have been using this design for several years going through several iterations, and decided to publish this one. After making a coffee you can remove your loose grounds pod from the machine and place it in this holder to let it cool off before cleaning. I found leaving it in the machine after making a coffee allows it to drip onto the tray below. This holder has a small reservoir at the base to catch the drips. The walls of the reservoir are slightly angled inwards to mitigate spillage when moving it around. I designed this to require no supports at all and it comes with 3 small feet if you want to use them.
