Hungry? I know I am, but you cant eat this benchy! This is a wacky benchy that is surprisingly easy to make. 80mm/s and .9 layer height, zero infill, use a **.4 nozzle. Make sure to set nozzle diameter to 1!** And 1mm for **all extrusions!** If your printer is struggling to push filament fast enough, just bump the temps up +10c. However, I did print the bench at 215 using a stock prusa mini and I didn't have any problems. I recommend you watch the whole print to make sure you don't get a "blob of death." I didn't have that happen when I printed it, but it could happen to you! Questions? Feel free to leave a comment and I will get back to you! Happy printing!
