I am not going to be running a body on my Traxxas Slash anymore as it gets to much air in the body when going at speeds. I dont want to grind the posts off for holding the body when flipping over, so i designed these to be slid on and screwed into where the posts do. These should wear down instead of body mount holders and prevent other parts from being damaged when flipped on the lid.

I plan on mounting a VG racing roll cage and some lexan body panels to give it a body latter on, these are just temporary. I will probably be designing a roof skid plate for the roll cage when it arrives.
