The title already explains a lot. ;-)

This is a GPU Riser PCB Support, which supports the slot and PCB of the riser cable.

Without the backed the PCB, were the PCI-E Slot is attached to, bent quite a bit. Especially when inserting the GPU and I feared it would break.

So I designed a mount that can handle the load of today's heavy GPUs and still match the aesthetics of the case :-)

The cutout is for the GPU release mechanism

This bracket in the picture was printed with **Prusament PETG Signal White 1kg** and its still holding up fine after 8 Month of usage
