Summary

Since the screwdriver tends to break off when you step on it or get lost. I constructed a replacement in two variants.

Since the screwdriver tends to break off when you step on it or get lost. I constructed a replacement in two variants. Both can be printed without support material. The normal version is simply printed standing up and can then be used directly. After printing, a 6mm x 35mm hexagon is glued into the "Hardcore" version. I used an old hex wrench to do this. I printed both versions from PLA with 60% infill 5 wall lines and 4 layers top and bottom.
