Sometimes it is not necessary to wear a seat belt, but then it is annoying that the alarm does go off.

For example, because there is something heavy on the passenger seat or on your own property, etc.

People who never want to wear a seat belt know where to find the plug under the seat, but this plug is not intended for them.

Tested in the seat belt of a Peugeot 3008 type I

Due to too high temperatures in a car, it is best to print the plug with PETG, but PLA is also sufficient if the plug is not stored in a too warm place in the car.

I myself printed the olug with 0.2 layer thickness and 100% infill
