Summary

remix of rigid dragon mount for mk3s bear

[3D Printers](#) > [3D Printers - Upgrades](#)

Tags: [dragon](#) [mk3s](#) [bear](#)

I really liked the mount. but needed to modify a couple of things. the height which the hot end sits was 3mm too high. also the counter bore for the screws was too deep.

Added 3mm to the mount and made the counterbore interface area 3mm thick so a 6mm screw would work. Also included a simple 3mm spacer if you don't want to scrap your print. the material where the screw sits is then 4.3mm, so a 8mm length screw will probably work. Not 100% positive tho.

Step file included, can upload solidworks file if you need it.
