Summary

A glass that folds on itself

[Hobby & Makers](#) > [Other Ideas](#)

Tags: [folding](#) [glass](#)

A glass that folds on itself useful when camping, in the car, in any case to always carry with you especially in this period of covid.

It is equipped with a case to be printed separately from the glass, then glue the bottom to the glass using the appropriate notch as a reference.

It is not my invention, my mother-in-law had an identical one from which I was inspired.

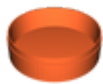

I printed it in pla but obviously it should be printed in petg for edibility reasons, if there was a truly transparent petg filament it would be practically the same as the original.

While I was writing this description I searched on google "folding glass" and the results were n billions so forget what I wrote above.

ps: for those who have not yet understood it, I have an anet a8 but I would like to win a contest to be able to use a prusa, perhaps with the mmu

You can find all my models [here](#), thank you who will appreciate with a **download** or with a **like**
