Summary

Replacement stove burner nob

[Household](#) > [Kitchen](#)

Tags: [kitchen](#) [stove](#) [stoveknob](#) [foodservice](#)

Made it for a friend who has a restaurant. Made it out of Prusament PETg Ultramarine Blue Transparent because that was the only PETg I had at the time and I don't think PLA would take the heat. I did .1mm Detail with 25% infill and supports on build plate with .2 contact Z.

The finished part pictured was 1st draft had to edit the fitting a bit and added the line to point to setting. I will include the Fusion 360 file so you can edit size to fit other stoves.
