Why

Just a simple picatinny mount that you can use to mount anything you like. Use it as a starting point for your own designs....or just print it and glue something to it.

Maybe you've always wanted to mount your wisdom tooth to your gun. Now you can!

Features

- Works on standard 21mm Picatinny/RIS rail
- Uses metric nuts and bolts

- Wisdom tooth not included

Instructions

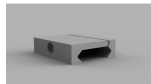

- Print it in PETG for a stronger part
- Uses M3 nut and M3x30mm (or longer) bolt

Open Source

As always the original design file (fusion360) is included, so feel free to improve it (or learn from it)!
