Summary

I plan to make the threads coarser, as many people have asked for, but right now I'm a little busy so I'll do it one day

Thank you to [z4h0n](#) for the first make on this model :D

A simple, scalable, ergonomic, knurled, modern, and slim-as-can-be pencil case (Sorry about all the adjectives, but it is all of them).

Big and long enough to hold all your pencil-shaped essentials. One version has pointy knurls, one is smooth, and another has flat knurls. the one with pointy knurls is a little chonky though.

I can't think of anything else to say about it. I mean honestly, everything has already been said, I wish I could fill this space more, but anything else would be useless promotional fluff. So enjoy the pencil case I guess, let me know if you have any problems, questions, or concerns, and if you could publish a make, that'd be great, thanks for clicking.

Below are some unimportant but helpful notes

I recommend pointing all pencils up, as overtime the lead will darken the lid, and the lid will be easier to re-print.

Just in case you're boring, I have also included a smooth pencil case. If you're not boring, you can use fuzzy skin painter on it :)

Apparently, the model has been printed by **REB** down to 25% scale. So, this means that you can (most likely) scale it up or down to meet you own needs, such as crayons, pens, etc.

User **ignicao** requested an o-ring to keep the “leaking smell of my 'pencils'” inside the case.

This was my first time doing an animation in fusion (the gif in the photos), I like how it turned out.

Maybe one day, I or someone else will remix the lid to have a pencil sharpener, that'd be fun.

Note: Some people who were new to 3D printing were requesting a file where the two parts of the model were not touching and were oriented for printing. THE ONLY WAY THE FILES IN THE FOLDERS DIFFER FROM EACH OTHER ARE THE ORIENTATION OF THE DIFFERENT PARTS.
