Hello, today I prepared for you remix of nice 3D model of Toothless. The original model has marking and different color of the left part of the tail. This was an imitation of the injury from the first film.

I removed this mark so I could print Toothless' girlfriend.

I recommend 2-3 perimeters, 15% infill, no supports.

The STL file is monocolour, 3mf multicolour version.

This remix is based on

None

Model files
