Skeleton Hand Bookstop

Halloween is just around the corner! Get your home ready for the spooky season with the **Skeleton Hand Bookstop**. This striking and functional bookend securely holds your favorite books while acting as a captivating piece of macabre art, perfect for your Halloween décor.

Design & Functionality:

Inspired by the intricate structure of the human hand, this bookstop provides sturdy support for your book collection. You can print a single hand to prop books against a wall or the side of a shelf, or print two (one mirrored) to create a dramatic freestanding set that cradles your books between them.

Key Features:

Detailed, anatomically-inspired skeleton hand design.

Sturdy and functional bookend.

Versatile Use: Can be used as a single bookend or as a pair.

A perfect statement piece for Halloween or year-round macabre décor.

Designed for high-detail 3D printing.

Printing Recommendations:

Hand:

Material: PLA or PETG. **Bone-white, white, or matte black filaments** are recommended.

Layer Height: 0.12mm - 0.16mm to capture the intricate bone details.

Supports: Tree/organic supports are essential for the fingers and palm area.

Infill: 20-25% for good weight and stability.

Base:

Material: Can match the hand or use a contrasting filament like **Wood PLA** for a classic look.

Infill: 20-25% or higher for added weight.

Assembly:

The Hand and Base print as separate pieces for optimal orientation and detail. After printing and carefully removing all supports from the hand, use superglue or epoxy to securely attach the hand to the base.

Commercial License:

The downloaded files are for personal use only under a non-commercial license. If you would like to sell physical prints of the "Skeleton Hand Bookstop," please visit **collecticraft.co** to find details about my commercial license tiers.

Download the Skeleton Hand Bookstop today and give your bookshelf a touch of macabre elegance for Halloween! Please share your makes and comments - I'd love to see how it looks in your space.
