Print Settings -

Approx. 6-8 hrs print time on a Creality K1 (0.20 mm layer height, 6 walls, 15% grid infill, PLA+ recommended). Tree supports enabled with a 30° threshold and placed on the build plate only for easy removal. Brim adhesion enabled (5 mm) to keep the model stable during high-speed printing.

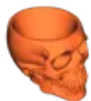

Assembly -

No assembly required. The skull is a single STL with highly detailed contours, deep cavities, and a clean silhouette. Simply print, remove supports from the eye sockets and jawline, and it's ready for display, or painting.

Additional Notes -

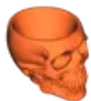

This model is optimized for high-speed detailed prints using grid infill and tree supports. The mesh is manifold, with over 1M triangles for realistic bone texture. Prints cleanly at standard scale but scales up well for Halloween props, or artistic display pieces.
