Tags: [mobilephoneholder](#) [ps5](#) [dualsense](#)

A little experiment with mounting my mobile phone (OP8T with bumper case) to a PS5 Dualsense controller using a simple snap-on mount. Borrowed the profile for the snap-on part from <https://www.thingiverse.com/thing:4668566> . Included are the model files (Autodesk Fusion 360) so that you can modify things to fit your phone.

!! Please be advised that this is a snap-on only mount to the controller, which may come loose due to the weight of the phone hanging outside of the hooks. !!

Everything is printed in Prusament PETG with a standard mini 0.4 nozzle at 15% infill with 0.20 layer height. Support is needed for the dualsense_phonemount_40w part.

Approximate print time 3 hours.
