Summary

A heavy-duty hook I made to hold a rain chain on an interior beam as a decoration.

We have a heavy copper rain chain, used instead of a gutter downspout, that we use inside as a decoration. I made a hook that would hold it up on an exposed structural beam so we could see the owls on the chain. The installed pictures show two hooks side by side. One is this uploaded design and the second is my first version that didn't work because it lacks the support that goes down the side of the beam and prevents rotation but it does add to the width of the holding area which worked with the large chain links.
