I modeled this mount to clip to the pole of a HDX 4-Tier Metal Wire Shelving Unit to mount an old Anker Lumos Lamp.

ID of larger circle is 30mm height is 5mm. ID of smaller circle is 25.5mm.

The shorter original version works great but the weight of the lamp makes it clamp to the pole at a weird angle. Added 25mm more height to V2_Taller to try and fix this.
