## Summary

I created this super simple curtain rod holders in order to cover the extra space under my stairs

---

[Household](#) > [Home Decor](#)

---

Printing 2 of these rod holders should fit on any rod 1in or smaller. Rods smaller than 1 inch will wiggle a little.

When attaching to the wall i mounted one first then treaded the curtain on the rod while it was in the mount and then attached the other mount to the other side.

This can be printed without supports if you print with the part that holds the rod facing down. The overhang is small and will never be seen once the rod is inserted in.

I printed on my MK3s and used the draft setting(.3mm layer height) for amazon basics pla with 10%infill. This seemed to be super strong.
