Summary

At the range working on your swing? Need a buddy to get a video? Not if you have an alignment stick and a printer!

Tags: [golf](#)

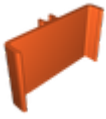

It's hard to prop of a phone on your golf bag high enough for a swing video to be useful. Sometimes there isn't anyone around to grab a quick slo-mo for you. If you have an alignment stick, you can use it as an easily adjustable, super steady phone stand with just a simple clip for your phone!

The clip pictured and the files attached fit a 78.5x10ish mm cross section phone (such as most recent, standard size iPhones in a thin case, like the one pictured). The SLDPRT file attached controls the phone and alignment sick dimensions in one easily-editable sketch so you can customize it as needed.

I can also provide edits upon request if you provide dimensions!

Prints vertically with no supports and any layer height. Extrusion width can be tweaked to fully fill the part with no patterned infill. This will help with clip strength and may reduce print time and printer shake.
