Summary

This device is meant to replace a broken sports bag strap link.

Almost all sport bags or ruck sacks come with a strap to wear around ones shoulder. This strap is attached to the bag via a rectangular plastic linkage to another smaller strap which is sewn to the sack. Some time ago I realized that the link on my wife's sport bag was broken so I made a replacement.

This was designed in tinkercad and printed on my mpselect mini V2 in fillemetum PLA.
