Summary

A Klingon sword for those who favor skill, speed and dexterity over the brute force of a bat'leth.

For the more skilled soldier of the empire, the mek'leth favors skills of speed and dexterity over strength.

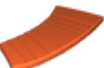

Designed in Fusion360 (this was a new type of designing for me and I am proud how it came out).

I printed this in PLA with a 0.4mm Nozzle, 0.2mm layer height and 20% infill. Blade prints in sections to accommodate most printer's build volume. Connectors hold and align pieces together for easy gluing (use glue sparingly).

Prop is 18 inches (~46 cm long) (1:1 scale replica as seen in Star Trek DS9) and modelled to be screen accurate.

If you like what I am doing, just send a friendly comment. Knowing people find my stuff useful and/or fun is enough, I do not require coffee or donations.
