Since the IKEA Malm is so wide, you can't attach a clamp lamp directly to it. This adapter enables you to fix a clamp lamp on the IKEA Malm and it also has a holder for the light switch.

The wall thickness has to be big so that the holder has enough stability. In my first Version the wall thickness was too low and it was bending and fell off after A while.

I pritnted it with PLA

you can print it without supports if you place the opposite side from the switch holder on the printer bed (right side on the photo on the printer bed)
