Tags: [cake](#) [mould](#) [loose](#) [tin](#) [cheesecake](#)

A tin or mould ideally for a non-bake cheesecake. Found myself needing one of these after realising I didn't have this size or shape! The base and rim print together but are physically separate, providing a snug but easily removable base. Printed with PLA on Prusa i3 MK3S+. The walls and base are 2.5 mm thick and requires around 150 g filament at 20% infill. Printed at 0.3 mm layer height to save time.

I have also made Heart and square shape versions. Hope you enjoy!

Disclaimer: this is not for baking, **do not** put this in an oven. Baking paper should also be lined over plastic to protect food.
