Simple case for an D1 Mini esp32 version.

D1 Mini snaps into position with enough space below and above for soldering, and you'll also have access to the reset button.

You'll find one version with a hole in the back and a lightbulb on the cover. There is also a generic version without hole and lightbulb.

Feel free to remix it!

Be careful, it might be tricky to open again after closing, a butter knife worked for me.
