

♀ Busty Female Body (Vase mode)

[VIEW IN BROWSER](#)

updated 5. 8. 2022 | published 20. 3. 2022

Summary

Busty & booty female torso. Bigger breasts, bigger buttocks.

Info:

- I took original (posted here by [@CorruptWave16](#)) which has origin on thingiverse
- but I tried to make it **more busty & booty**

Print instructions:

- see 3mf files
- attaching more than one scale variations
- **obviously bigger breasts are harder to print**, because of overhang, but I have found settings that works for some of my filaments
 - also using variable layer height - basically the most problematic are breast overhang and shoulders, so attached 3mf files have 0.07mm layer height there

- **recommendation:**
 - try the lower breast part for the beginning (by moving the model below the surface & use negative volume for the rest above breast) - to know if it will print safely
 - i uploaded also these 3mf files for this part test
- **attention:**
 - uploaded settings **worked for my Prusament Vanilla White PLA**
 - but it didnt go well for example with Prusament “Oh My Gold”
 - the lower breasts part was ugly
 - so choose filament, with which you have best Vase mode results with overhangs and try for the beginning test file for breast part
 - also shoulders may be problematic, you can test this part 1st too
- 50% scaled model is more easy to print
