Summary

Simple wall bracket for a 60mm refractor telescope.

Tags: [bracket](#) [telescope](#)

This is a simple telescope bracket, originally designed for a SkyWatcher 60mm telescope, but should fit similar 60mm refractor telescopes.

Allows the telescope to be mounted on the wall, instead of taking up floor space on the tripod.

When printing, it is best to increase the perimeters to 4 or 5 and the infill to 30-40%.
