This is a model of the battery for a Macintosh PowerBook 1400. It fits the existing battery bay, and includes the appropriate slots to align and latch into place. I am not an engineer, just a hobbyist.

You can print an entire battery and insert it as a blank, or pull the model apart to print just what you need. I made a version that uses an existing battery faceplate to turn the battery bay into a drawer.

Please remix and share your creations.
