put your hackrf one in your desktop computer. this uses two small m2.5 screws. i had to drill out the pci holes for the hackrf antenna and buttons so it would fit. i also have this in my computer so I can plug in the hackrf via micro-usb inside my computer: <https://www.microcenter.com/product/603203/micro-connectors-acrylic-internal-usb-hub-with-magnetic-base>
