### Summary

This weekend I had a surprise with my shower head holder: it was broken. Then I decided to fix it!

This weekend I had a surprise with my shower head holder: it was broken. Then I decided to fix it!

Because my 3D printer is really tiny (TinyBoy V1), I had to design it to be printed in two pieces to be glued together. And that's it, now I can, again, have a shower whilst using both my hands :D

This thing was designed using Fusion360 and I hope you'll be able to access from here: <http://a360.co/2kHb2ZF>

And, if you liked this thing, don't forget to visit my personal website: [ricardodeazambuja.com](http://ricardodeazambuja.com)

**DISCLAIMER: use it at your own risk ;)**
