The other day I was having problems playing a Disney DVD on my computer using the great [VLC](#). It was the Finding Dory one and some scenes would jump or have problems with the sound. I've solved my problems buying a used Sony DVD from a charity shop (thrift store) for 5 pounds (GBP). However, I wanted to put it under the computer screen, but the screen would become wobbly. The 3D printed feet keep the screen stable now.

It's a very simple design, but anyway I'm sharing it here: <http://a360.co/2kJgxdD>

And, if you liked this thing, don't forget to visit my personal website: ricardodeazambuja.com

DISCLAIMER: use it at your own risk ;)
