### Summary

A small and simple mod to allow for use of cables with connectors with a larger circumference than the original.

[Gadgets](#) > [Audio](#)

Tags: [headphone](#) [mod](#) [headphones](#) [mods](#)

A small piece to replace the original metal piece to allow for use with cables where the circumference of the connector housing is a little larger than the original cable.

Should be printed standing on the edge with the holes and with supports turned on. Infill doesn't matter but 100% is recommended due to the small size. Might require a little bit of sanding on the inside.

The three files in the post are the different inner diameters of the connector hole.
