This Apple Watch band holder can mount on a wall or cabinet door using the convenient screw holes (perfectly optimized for a #6 wood screw), or your favourite mounting tape.

You can store multiple bands in each section; the convenient guide bumps keep everything neatly organized for when you show this off to your friends and family.

I've uploaded a few versions to make everyone feel special. The [A x B] file name format refers to the number of sections, and the number of bands per section. A 6x3 version is pictured in the cover photo.

There are two revisions:

- R3, fits 38/40/41 mm **and** 42/44/45 mm bands.
- R4, fits 42/44/45/49 mm bands (Apple Watch Ultra), **but not** the smaller ones.

You may be wondering—why not design this with hidden screws? Two reasons: it's easier to print, and if you have so few bands that you can't cover the screw holes with one at all times, you probably don't need this product.

I have personally conducted several high velocity cabinet door opening tests, and not a single band has fallen off. Bonus: the top of the holder is a great shelf where you can put things (unless you've mounted it inside a cabinet door; then they will go flying).

If you'd like a specific size that isn't here yet, please message me and I'll generate it for you. (The entire project is designed in OpenSCAD and fully parameterized.)
