I used to make cables for SFF PCs. I don't anymore, but I want to share my tools. This is a jig to help make the process easier. It contains all of the lengths used to make an angled 24-pin cable inside of a Louqe Ghost S1. Lay the cable in the trench, cut to length, strip the wire, and crimp the connectors on.

Use the boxes to position various cables (PCIe, CPU, etc...).
