## Summary

An unofficial model from Marvel's Avengers.

I couldn't find any good Helicarrier models online, or at least one for 3D printing, so I made one myself. It's probably only about 80% accurate and fairly low poly, but it looks pretty decent as a small model (although my paint job SUCKS). I might refine it as time goes on.

There is no scale. I couldn't find an official size for the Helicarrier. So I just made it approximately 12" for a nice, decent-sized model. You should be able to scale to approximately 50% of the current size and it'll probably look okay (although you'll lose some detail around the engines and the control tower). At larger sizes the general lack of fine detail will start to become apparent though.
