Summary

An angled stand that holds 20 N64 games which allows you to glance at all labels while holding securely.

This is a quite large N64 Game stand, to fit on an ender 3 you must print on it's side at an angle, this makes the overhangs short enough they shouldn't be a problem. The shelled model uses around 370 grams of filament depending on your slicer settings. I printed it in 21 hours using a 0.6 nozzle and 0.4 layer height. It is quite sturdy and without shelling the bottom it was taking up nearly half a roll of filament in print estimates.

I ended up having a slight layer shift on my print that luckily didn't effect holding ability.
