## Summary

A cover for the top of the pipe post, with integrated PET bottle screw, for a geocache container

---

I created this custom cover for a 6cm diameter pipe for my geocaching container (also 3D printed, with the size of an unblown PET bottle.

Also added some strengthening bars for the PET screw, so it doesn't break away on rough handling.

My first 3D creation. Have mercy :)

Have fun and post your makes.
