T-Antenna mount for the Believer 1960mm UAV. Print 2, and sandwich them together over the antenna. Made to permanently hold the standard Frsky T-Antennas in the holes near the autopilot using foam-tac. When installing, remember your receiver antenna angle to the transmitter antenna matters!

rev. 1

Sliced out a little more of the T joint area to make a little more room for the existing plastic on the antenna.

This thing was made with Tinkercad. Edit it online <https://www.tinkercad.com/things/1xi7GO6aSEA>

Category: 3D Printing
