## Summary

Used to elevate sections of "eggcrate" in an aquarium.

[Household](#) > [Pets](#)

Tags: [aquarium](#) [reef](#) [frag](#) [eggcrate](#) [fragrack](#)

These are legs/standoffs used to elevate the 3D printed eggcrate I found on [Thingiverse](#). They can be used for frag racks or in my use case, to lift bio filter media off of my sump floor for increased flow.

They are designed to be a friction fit and hollowed and tapered to print at 100% infill with no supports.
