### Summary

Shallow shelf for storing/displaying your guitar pedal collection on slatwall (or on normal walls with command strips!)

As you might guess, I have a slatwall in my studio which my guitars live on. I was using some wire slatwall shelves for pedal storage until I had an epiphany.

"I bet I could blatantly rip off Josh's JHS Pedals pedal wall and 3d print it – and then maybe I might look a little more like a cool youtuber and less like a guy living in a run-down guitar center knockoff".

So, I designed this. Compact enough that it can comfortably live behind your guitars when wall-mounted, but still enough room to kick back most of your pedals for a good aesthetic (and easy access!)

I've included the models for both slatwall mount, and non-slatwall (using screws/anchors or medium picture hanging command strips (the velcro kind). Note, I have not tested with command strips, but assuming you don't overload them, it should work just peachy.

Also, if you need a different length, just leave a reply and I'll try to post it up. The stock length is 180mm tall, so should be printable on a prusa mini!
